

CodeTwo Public Folders aids groupwork

Support for Windows 7, Windows Server 2008 and Microsoft Office 2010, improved communication protocols and simplified installation procedure comprise the latest changes in the new release of CodeTwo Public Folders. From 1 Dec the application is available for download from the website of the publisher – CodeTwo.

CodeTwo Public Folders is an application to share in Microsoft Outlook contacts, calendars, Office documents with other users in the corporate or home network. - *Version 4.5 works with Windows 7, Windows Server 2008 and Windows Server 2008 R2.* – says **Michał Bednarz**, the owner of CodeTwo. – *The application is fully compatible with the latest product of Microsoft, Office 2010.*

Along with bringing the application in line with the latest releases of Windows, CodeTwo programmers have introduced a wide range of improvements to simplify the work with CodeTwo Public Folders 4.5 itself. These include a new option in the context menu for personal folders that can be shared now in a single click, support for indexing in Windows Desktop Search as well as Vista and Windows 7's indexers, changed synchronization algorithms facilitating switching between online and offline modes, and finally improved synchronization between Outlook Add-ins thanks to data compression.

- The remaining improvements will surely please server administrators in companies. One of them shortens the time required to deploy the program, and I believe we will all agree that time is a precious commodity – says Michał Bednarz. – To simplify the installation of the application we merged previously two separate setup files into one installer. What is more, the installer is now capable of looking up the currently used version of the program and suggesting whether an upgrade is necessary. We have also changed the licensing system – the current one eliminates the need to send us the registration code from the program in order to receive the activation.

CodeTwo Public Folders is one of the flagship applications of CodeTwo company. It allows firms to boost groupwork potential and streamline the workflow as well as facilitate data exchange between multiple computers within one network. The application has the same features in terms of folder and data sharing as Microsoft Exchange Server. This makes it an economically viable alternative to Microsoft's solution.

One of the ways in which CodeTwo Public Folders can be used is supervision of task completion in the company. Owing to such features as sharing calendars or sharing company mail, the manager will know at a glance how the work is progressing and will be able to check the free/busy status of the team members. It will also be no problem to check the quality of the service that is received by firm customers by browsing the mailboxes of reporting employees. – *Our application helps create multiple workgroup scenarios accomplished through sharing selected folders in Outlook.* – says **Michał Bednarz**.

Key features of CodeTwo Public Folders:

- creating shared calendars and assisting in planning appointments
- building a common database of contacts and address book
- sharing mail with multiple users
- viewing and group work on tasks
- sharing personal folders to other users
- sharing a library of electronic documents
- creating electronic message boards and discussion groups
- ability to work offline outside the network
